CAREER OBJECTIVE

Artificial Intelligence and Data Science engineering student with hands-on experience across the ML workflow: cleaning and preprocessing 50,000+ records, training and evaluating models in Python (Pandas, NumPy, Scikit-learn, PyTorch), and integrating models into applications through FastAPI and OpenAI API endpoints. Completed two ML internships (FlyRank AI, Neurofive Solutions). Seeking an AI/ML Intern role to build AI-powered applications, improve model accuracy and efficiency, and document findings clearly.

TECHNICAL SKILLS

Languages: Python, SQL, C++ (Foundational)
ML Libraries: PyTorch, Scikit-learn, Pandas, NumPy, OpenCV, MediaPipe
Machine Learning: Linear & Logistic Regression, Random Forest, Gradient Boosting, Feature Engineering, Imbalanced Data Handling, Model Evaluation (R-squared, MAE, MSE, RMSE, Precision, Recall, F1)
Data Preprocessing: Data Cleaning, EDA, Missing Value & Outlier Handling, Correlation Analysis, Hypothesis Testing
AI Apps & APIs: FastAPI (REST), OpenAI API, Webhooks, n8n, Streamlit
Tools: Git, Linux

PROFESSIONAL EXPERIENCE

Machine Learning Intern — FlyRank AI
June 2026 – September 2026

Bengaluru, India

- Cleaned, preprocessed and analysed 50,000+ unstructured records with Pandas and NumPy, handling missing values, outliers and anomalies and extracting features for model development.
- Developed, trained and iterated machine learning models on real operational datasets with engineering teams, boosting prediction reliability by 18%.
- Evaluated models on Precision, Recall, F1 and RMSE to confirm stable results and guide accuracy improvements before deployment.
- Integrated model inference into lightweight FastAPI REST endpoints so models could be consumed by production software.

Machine Learning Intern — Neurofive Solutions
March 2026 – June 2026

- Learned the full ML workflow (data preprocessing, model training, evaluation), then independently delivered 3–4 end-to-end ML projects.
- Compared 4 or more models across projects and selected the best performers, reaching roughly 80–90% accuracy.

TECHNICAL PROJECTS

Time-Series Market & Volatility Prediction Pipeline
Python, Scikit-Learn, Streamlit, Pandas

- Built an end-to-end forecasting pipeline over sequential historical datasets, from exploratory analysis to final model selection.
- Engineered features (rolling averages, volatility indicators) and trained Random Forest and Gradient Boosting regressors, achieving a 15% RMSE reduction.
- Used time-ordered train/test splits to prevent look-ahead leakage and benchmarked ensembles against baselines.
- Deployed an interactive Streamlit app to visualize predictions, confidence intervals and trends in real time.

LeadGenius AI — Autonomous Lead-Qualification & Scoring Agent
n8n, OpenAI API, Webhooks

- Built an AI-powered GPT-4o-mini and n8n pipeline, integrated via API and webhooks, that scores business data against defined criteria and reduced manual processing time by 75%.
- Enforced a strict JSON output schema with error handling and automated fallbacks so scores flowed into routing with no manual cleanup.

AI-Powered Multipurpose Drone & Real-Time Vision System
Python, OpenCV, Computer Vision

- Engineered a real-time computer vision system for aerial surveillance and anomaly detection, processing live 1080p video at 28+ FPS with low latency.
- Implemented automated event-detection logic for boundary triggers and anomalous behaviours, generating real-time operator alerts.

EDUCATION

Bachelor of Engineering in Artificial Intelligence and Data Science
Aug 2023 – Jun 2027

KLE College of Engineering and Technology, Chikodi (VTU) | CGPA: 7.95 / 10.0
Relevant Coursework: Machine Learning, Artificial Intelligence, Deep Learning, Data Structures, Database Systems

CERTIFICATIONS

- AI Governance Certification — Securiti Education (Credential ID: 14B32009A-14B31FF09-1450DE2E8)
- Artificial Intelligence Fundamentals — IBM SkillsBuild
- Career Management Essentials — IBM SkillsBuild
